/Peter M. Cuomo/ Supervisory Patent Examiner, Art Unit 3654		

Continuation of 11. does NOT place the application in condition for allowance because: Applicant has not convincingly traversed the rejections of obviousness in view of the teaching of the prior art of record. The primary reference discloses the centering of an elevator car using magnets having interactive, attractive forces whereby the secondary reference teaches the use of magnets affording interactive, repulsive forces for vibration damping of an elevator car. That the magnets of the secondary reference are to maintain a "longitudinal gap" and are not for centering the elevator car does not preclude the teaching in view of the use of magnets affording repulsive- in lieu of attractive interaction. Furthemore, the "floating" effect of the secondary reference is in keeping with the understanding of the function of the instant invention in view of the interaction of its magnets and the ability of the "...cross members to traverse freely from one direction from one surface to another surface of the respective upper- and lower guide members...", whereby an objection was made to the disclosure that a "floating" effect was neither referenced in the disclosure, despite the understood interaction of the magnets, nor adequately traversed in applicant's arguments; yet applicant has used the similar term "floating" in his review of the secondary reference. Additionally, as noted in the objections to the disclosure, the magnets of the instant invention provide, as understood, vibration damping as well as centering of the car. The replacement drawings submitted 26 June 2008 are acceptable.
